Radiograph Report

Gradings

- 0 = No abnormality seen
- 1 = No Clinical Significance
- 2 = Unlikely to be of clinical significance [low risk]
- 3 = Possible clinical significance [moderate risk]
- 4 = Probable clinical significance [high risk]

- LF Navicular. – 0
- LF Foot. – 0
- LF Fetlock. – 0
- LH Fetlock. – 0
- LH Hock – 0
- LH Stifle – 0
- RF Navicular – 0
- RF Foot – 0
- RF Fetlock. – 0
- RH Fetlock. – 0
- RH Cannon – 1 – smooth lump on outer mid cannon
- RH Hock. – 1 – Mild narrowing of DiT joint
- RH Stifle. – 0
- Dorsal Spines – 0
- Cervical Vertebrae – 0

Declaration: The owner declared that the horse has no vices, no allergies, no previous surgery or recent medication.

Bloodwork: Blood samples were taken for storage .

Conclusion:

On clinical exam the horse was good on palpation. Trot ups and flexion tests were sound.
She was sound on all surfaces.
Her temperament and conformation are good too.

Radiographs show no significant abnormal findings.

She is therefore a normal risk for future Sport horse use.
